

EINTAUSEND

We are proud to introduce our **flagship diving watch**, the limited edition KAZIMON · ZEITMESSINSTRUMENTE EINTAUSEND diver by Kazim Kenzo.

A timepiece for which form truly follows function, the EINTAUSEND, whose name (in German) reflects its **1000M/3300ft water resistance**, also features **shockproof** and **antimagnetic construction**. It truly is a precision instrument without compromises, designed to exceed the requirements of professional divers. At the same time, the refined fit and finish of the EINTAUSEND also makes it at home on the wrist in the boardroom.

The design philosophy of the EINTAUSEND begins with the CAD designed heavy 44mm case cut from a single block of the **high quality 316L stainless steel**, with the outside surface smoothed to a satin bead blasted finish.

An integrated **automatic Helium Escape Valve (HEV)** provides a safe means to vent case pressure, making the EINTAUSEND suitable for saturation diving. **Extreme water protection** is provided by double O-ring seals for the massive metal caseback and large, easy-to-grip **7mm screwdown crown**.

The caseback is individually numbered and engraved with our custom logo that also serves as the indentation for opening the watchcase. The **unidirectional dive bezel** is clearly marked to monitor dive times, with a large serrated edge for excellent grip, even when wearing thick gloves. A heavy duty bezel spring ensures positive clicks when setting the initial dive time. The bezel surrounds a **3mm** thick scratchproof **domed sapphire crystal**, which features an **anti-reflective (AR)** coating on the inner surface for clear viewing from all angles.

Inside the EINTAUSEND beats a **25-jewel shockproof Swiss ETA 2824-2** automatic movement, which features handwinding, hacking, quick set date, and hours, minutes, and seconds functions.

The EINTAUSEND features a **soft iron inner case**, which protects the movement from magnetic fields on the order of 80,000 A/m.

The dial and hands of the EINTAUSEND are coated with C3 **SuperLuminova** for superb readability under reduced lighting conditions. The clean appearance of the hands are enhanced by the color matching of their base to the color of the matte dial. The EINTAUSEND comes with a stainless steel 22mm bracelet attached to the case with a solid screwbar. The individual bracelet links are also connected via screwbars for easy resizing. The bracelet clasp features both a dive extension and microadjust for optimum fitment.

The EINTAUSEND ships in a water resistant hard shell Pelican case with tailored foam cushioning, custom caseback removal tool, and warranty card of unconditional guarantee.
